Profile

Flexible and innovative Geography Graduate with an in-depth understanding and genuine interest in environmental and natural sciences. Recently completed BSC in Geography, accredited by the loyal Geographical society (with IBG), achieving first class honors at university of Sussex.

For her continuous studies, she is carrying out research on a new system to allow easy access to the world's population information.

Goals and objectives:

- Finding a quick access and less time-consuming website with accurate results.
- Creating and promoting an easy way of finding resourceful and reliable means of acquiring world's current data.
- Implementing and designing a new system to allow easy access to population information.

Senario:

As an environmental consultant at GeoNet, your role involves optimizing the geographical application's data structure and developing an intuitive web interface for accessing environmental data. You collaborate with stakeholders to understand their needs, including granular data access, real-time updates, historical analysis, and geospatial visualization. Implementing robust security measures, you ensure the protection of sensitive environmental data. Through testing and training, you deploy the enhanced system, empowering users to make informed decisions for environmental management and sustainability.
